

TRANSPORT OF ADR GOODS

SOLUTIONS FOR CHEMICAL INDUSTRY

Case study

■ SITUATION

The customer, a major chemical distributor, purchases hazardous goods from a supplier in China at FOB Chinese port parity. In the past, he has repeatedly had inspections at a European port reveal significant deficiencies in the packaging and labelling of both the goods and the container. This not only meant more costs for him, but also a deteriorated rating with the port authorities. This in turn brings the risk of increased inspections and thus increased costs.

■ ASSIGNMENT

Resolve this situation and gain 100% control over the packaging and labelling of dangerous goods.

■ SOLUTION

Delivery condition changed. Goods are deposited at the nominated BDP warehouse where packing, palletising, labelling and container loading takes place, including the necessary photographic documentation.

The service can be limited to a visual inspection of the container or extended to include the possibility of taking a sample for quality control, etc.
